

Why choose Sensees Outdoor

Sensees Outdoor Air Quality Monitoring System is a professional solution for outdoor monitoring of multiple air quality and other environmental parameters.

System consists of a number of sensor modules connected to the Sensees Cloud. It monitors multiple parameters, collecting, analyzing, and graphically displaying real-time measurements.

Simplify decision-making with real-time environmental data

Sensees Outdoor

- Customisable monitoring station
- Precise, accurate and validated data
- Multiple connectivity and power options

Sensees Cloud

- Comprehensive IoT platform
- User-friendly interface
- Painless integration
- Easy data accessibility
- Annual reports
- Multi AQI support

Sensees Urban Air Quality Model

- High-resolution coverage (up to 10x10m)
- Real-time data
- Multiple data sources
- Dynamic predictions

Multiple air quality challenges, ONE provider to rule them all.
